

Dental restorations – a matter of trust!

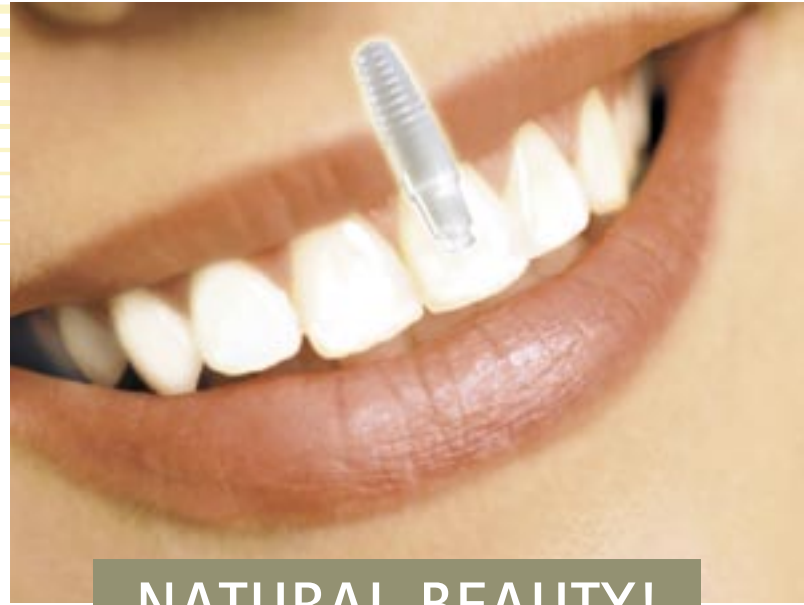

If you consider the option of an implant-supported restoration, your dentist or your dentist's colleague, who is working in the field of implantology, will provide you with qualified advice about this type of surgical treatment.

Dental implantology is a recognized field of dental treatment and based on experience gathered over decades.

Consult your dentist and ask for the perfect aesthetic solution - whiteSKY from bredent medical.

Stamp of practice

NATURAL BEAUTY!

Give yourself and your friends back what is most precious - your smile!

Cross section of implant with single crown

Your „second“ teeth are one of a kind!

The loss of a tooth, especially in the area of the incisors, will not only reduce your quality of life while eating or speaking but also deprive you of one of the most significant features of your personal appearance - your smile.

If an accident or a disease results in the loss of a tooth, your dentist will try to close the gap with an artificial restoration and to restore the function of your dentition. For this purpose he will use existing natural tooth substance - if available - or an artificial tooth root, a so-called implant.

Implants represent „tooth replacement“ in the truest sense of the word since they replace the natural tooth root and are integrated in the jaw bone and thus form a solid basis for single crowns, multi-unit bridges or even full dentures.

Aesthetics in perfection!

High demands are placed on anterior restorations. Whereas the emphasis is put on the function in the area of posterior teeth which are exposed to enormous masticatory stress, aesthetics is a major aspect in the area of anterior teeth. What is more logical than using an implant made from a material which exhibits properties and a shade almost identical with those of natural teeth?

We are talking about zirconium dioxide. This ceramic material is white as the natural tooth. It offers superior biocompatibility since it does not contain any metals. And it is harder than titanium, the traditional implant material.

The zirconium dioxide implant whiteSKY from bredent medical will give you back your quality of life and your smile - guaranteed.

Advantages for you:

- Natural tooth shade
- Free from metals
- Unsurpassed biocompatibility (ideal for allergy patient)
